

Animal Breeding

Software for Colony Breeding

Animal Breeding

Animal Breeding (formerly known as Scion) provides a complete breeding history for your entire colony and allows for the scheduling and tracking of injections, matings, litters, genotypes, phenotypes, and pedigree data. Animal Breeding's event scheduling functionality allows colony managers to assign, update, and reconcile work duties for colony staff.

Key Features

- ✔ Track essential colony breeding data.
- ✔ Track cryopreserved embryos.
- ✔ Setup recurring matings.
- ✔ View pedigree data in graphical hierarchies.
- ✔ Manage large numbers of animals and colonies.
- ✔ Perform comprehensive searches for data.
- ✔ Track genotypes for individual animals.
- ✔ Schedule gestation- and weaning-based events.
- ✔ Track procedures such as tail snips and euthanasia.
- ✔ Setup security to allow investigators to work in silos.
